"Electromagnetic fields & radiation damage DNA & enhance cell death rates & therefore they are a ubiquitous universal genotoxic carcinogen (cancer causing). The only safe exposure level is zero"

DR. NEIL CHERRY

Professor of Environmental Health
 Lincoln University, New Zealand

" Electromagnetic Radiation such as that emitted by mobiles and cordless phones can heat the side of the head or pulse it non-thermally and potentially, thermoelectrically interact with its organic electrical content, "The Brain". Certain " Heavy" Mobile -Phone users may be more susceptible to developing malignant brain tumors."

DR. VINI GAUTAM KHURANA.

Associate Professor of Neurosurgery for
 The Australian National University
 Medical School

"Exposure to radio frequency (RF) signals generated by cell phones have increased dramatically and reported to affect physiological, neurological, cognitive and behavioural changes and to induce, initiate and promote carcinogenesis (Cancer)"

DR. GURSATEJ GANDHI

Reader, Deptt. of Human Genetics
 Guru Nanak Dev University, Amritsar
